Founder and AI engineer who builds clinical AI, from the decision engine and LLM pipeline to the clinic workflow it runs in.

PROFESSIONAL EXPERIENCE

Oriva Health

Oct 2026 – Present

Founder & CEO

San Francisco, CA

- Run Oriva, a clinical AI platform working with 2 design-partner dental clinics; our voice agent Veronica, built by our CTO, has been taking real patient calls since September 2026 and books through the scheduler I built.
- Leading the next build: practice-management integration and new AI agents for post-visit notes, treatment plans and follow-ups.

Founder & AI Engineer · CU Boulder venture (Catalyze CU, NSF I-Corps), Boulder, CO

Apr 2026 – Sep 2026

- Built the clinical engine (Python, FastAPI, Cloud Run) on 1,000+ likelihood ratios across 42 questions from AAE guidelines and the literature, refined with CU Anschutz faculty; it picks each next question by expected information gain and returns calibrated confidence and an urgency band.
- Kept the LLM out of the engine's clinical decisions: Claude Haiku 4.5 only turns what patients say into structured answers, while a safety layer checks hard red flags on every turn and tells anyone with breathing or swallowing trouble to call 911.
- Engineered a voicemail triage service (Twilio, Deepgram Nova-3, Claude Haiku 4.5 with schema-constrained JSON) that sorts messages by intent, extracts caller, patient, callback number and dates, and flags emergencies, falling back to Gemini, then keyword rules.
- Created the Smart Questionnaire (Next.js, React), where patients tap painful teeth on a jaw map and answer 6 to 15 adaptive questions, and a booking service (FastAPI, PostgreSQL, Cloud Tasks) that books slots in our own scheduling database and schedules outbound calls.
- Wrote an automated evaluation harness and assembled a 459-case labeled set, mostly from published dental case reports, to track top-1 and top-3 accuracy, urgency-band accuracy, calibration and confusions between conditions; every engine decision is audit-logged.
- Ran 60+ NSF I-Corps interviews with dentists, hygienists and front-desk staff and shadowed a clinic front desk for a day; expanded the product from emergency-only to routine care and signed 7 letters of intent.

GoodieBag Food Co. (Techstars-backed)

Jun 2025 – Apr 2026

Data Science & AI Intern

Boulder, CO

- Shipped the company's first AI support chatbot for a business with 180K+ customers (RAG on PostgreSQL/pgvector, FastAPI, HubSpot integration); it resolves routine tickets on its own and flags likely fraud, cutting manual triage by 70%.
- Developed a multimodal agent that turns product photos into ready-to-post marketing content, raising the team's content output by 55%.
- Set up the company-wide Tableau analytics platform (SQL pipelines, 20+ KPIs) that staff used to track sales, partner onboarding and orders.

C5 Consultare / University of Denver

Sep 2025 – Mar 2026

Data Analytics Intern

Arvada, CO

- Partnered with a PhD researcher on whether college pays off: merged national debt and earnings data (100k+ records), modeled which programs leave graduates in financial distress, and shipped a searchable dashboard, then presented the findings to client executives in Power BI.

PROJECTS

Project Uzima: Emergency Bed-Finding Voice Agents (AWS Healthcare AI Hackathon, 2nd Place)

[GitHub](#) | [Video](#)

- Designed a multi-agent system that calls every capable hospital in parallel to find an emergency bed, one containerized voice agent per hospital (Twilio, GPT OSS on AWS Bedrock), with every answer read back and confirmed before it counts.
- Split the backend into six FastAPI microservices, including call coordination, voice, live event streaming and an encrypted HL7 FHIR patient handoff through a SMART Health Link, behind a React map dashboard, covered by 76 automated tests.

InterViewAR: Real-Time VR Interview Coach (CalHacks 12.0, Fetch.ai Track Winner)

[GitHub](#)

- Implemented the real-time backend for a Meta Quest 3 interview coach: seven Fetch.ai agents turn live mic audio into pace, filler-word and tension scores, push coaching cues to a WebXR HUD every 1.5 seconds, and batch speech by silence before Groq Whisper.

EDUCATION

University of Colorado Boulder

Aug 2024 – May 2026

Master of Science in Data Science (GPA: 3.8)

Boulder, CO

- Chair, Data Science Student Association; Course Assistant who taught 12 labs in Python, R and Excel to 120+ students.

Maharaja Surajmal Institute of Technology

Aug 2019 – Jul 2023

B.Tech in Electronics and Communication Engineering (GPA: 3.9)

New Delhi, India

AWARDS & PUBLICATIONS

- 2nd Place & People's Choice**, AWS Healthcare AI Hackathon · **Winner, Fetch.ai Track**, CalHacks 12.0 · **Finalist**, Boulder Startup Week
- Catalyze CU** accelerator (\$25K equity-free) · **TiE Women** Silicon Valley semifinalist · **Chicago Venture Summit 2026** Future of Health portfolio
- IEEE Access** (peer-reviewed, 2024): co-author of a usability study of payment apps with 15 visually impaired participants.
- Methods paper, in preparation** (with R. Cox): a sequential probabilistic framework that triages healthcare appointments by urgency.

SKILLS

AI & LLMs: Claude, Gemini, Bedrock, Deepgram, RAG (pgvector, FAISS), tool calling, structured outputs, multi-agent systems, LLM evals

Engineering & Data: Python, SQL, FastAPI, PostgreSQL, Next.js, React, Docker, Google Cloud, pandas, R, scikit-learn, Tableau, Power BI

Product & Healthcare: customer discovery, workflow mapping, user testing, clinical workflows, HL7 FHIR, HIPAA, audit logging
